

## The Power Breezer

### **Powerful & Economical**

The compact, strong and easily deployable Power Breezer quietly cools up to and over 3000sf. It has been specially designed to cool outdoor or partially covered spaces (anywhere with natural air flow) without getting seats, clothing, or sensitive equipment wet. Amazingly, it can lower the temperature over 27 degrees within 1 minute, while consuming less energy than a hair dryer.

### **The Ultimate Cooling Solution**

The 100 gallon tank can last about four days running at full speed for up to 10 hours a day. The fan head is capable of fast moving oscillation and stores conveniently in the base (42" x 42") for easy transport with a truck.

- **Perfect for any outdoor event**
- **Actually lowers temperatures by up to 27 degrees**
- **Cools up to a 3000 square foot outdoor area**
- **Misting distance is only 6 feet, leaving the rest of the area cooled and mist-free**
- **Manages flying insects**
- **Approved and used by U.S. Military**
