Tent Furnace 12/1/17

***** IMPORTANT: Remember to turn gas valve on before use*****

***** Remember to leave enough time to warm up your tent *****

Information:

The furnace will power on and off based on the temperature setting selected. Any extension cords used with the furnace must be three pronged (grounded).

We recommend turning your furnace on prior to your event to give the furnace time to warm the tent. The amount of time can vary based on how cold it is and how big your tent is but plan for 15 minutes to 1 hour.

Start-Up Instructions

1. **Done by DeeJay's** - Connect regulator to propane tank by tightening in a counter-clockwise direction.
2. **Done by DeeJay's** - Plug the tent furnace into the thermostat.
3. **Done by DeeJay's** - Plug thermostat into grounded outlet.
4. **Done by Customer** - Set the thermostat so that it demands heat.
5. **Done by Customer** - **Open gas valve on propane tank** by turning in a counter-clockwise direction.
6. **Done by Customer** - Press power switch ON (turn rocker switch UP). Furnace should ignite.

Shut Down Instructions

1. Turn off gas valve on propane tank by turning in a clockwise direction.
2. Turn thermostat down so that it does not demand heat.
3. Press furnace switch to OFF (turn rocker switch to middle position -- not up or down).

Troubleshooting

- If furnace is on but not putting out heat:

1. Check the rocker switch to make sure you have the furnace set to HEAT and not to OFF or VENT.

- If furnace won't turn on:

1. Check propane tank to ensure that the valve is open and that it still contains gas. It should weigh at least 100lbs. If it does...
2. Shut down furnace using above shut down instructions and unplug.
3. Open **both side doors** on short sides of furnace with a flathead screwdriver.
 - a) Press red reset buttons behind each door. (if there are two red buttons, press both)
4. Close and secure the doors.
5. Start up furnace again using above start up instructions.

- If furnace is cutting on and off or the switch light on furnace is flashing (3 times):

1. Check that the gas valve is turned on.
2. Check to see if the propane tank is empty.
